

HEAD AND NAPE PROTECTOR OGK-1 Protects against flame, splashes of molten metal and intense heat radiation. It is designed for use in conjunction with clothing or other protective clothing to work on the release and spill steel and non-ferrous metals. It is made of metallized glass fabric and cotton fabric flame retardant which is the lining.

HEAD AND NAPE PROTECTOR OGK-1

Its task is to protect the head and neck while in operation. On the neckline in the sides and back there is sewn rubber tape in the tunnel. It is designed to fit the cover of the head and neck to the user's body and prevent it from sliding.

In the back part there are made four vents which ensure the free flow of air. There is possibility to use the protector with visor for the face. Additional protection against splashes of molten metal is a peak. The front of protector is fastened with velcro with control possibility.

RECOMMENDATIONS: Should be used together with another clothing: leggings, gloves and apron.

SAMPLE APPLICATIONS:

- caster of metals
- quencher
- roller
- founder
